Conclusion of the Agreement on Patent Defense Against a Competitor for an Amount of €10M

MGI Digital Technology (FR0010353888 ALMDG) announces the successful conclusion of an agreement regarding a patent infringement case, resulting in compensation of 10 million euros.

This procedure, initially launched in 2017, led to two court rulings in 2021 and June 2023, before reaching an amicable settlement for a global exploitation license.

The payment of this license by the infringing company further strengthens the financial stability of the group, which already had a net cash position exceeding 20 million euros as of the end of June 2024.

This success also highlights the recognition of MGI Digital Technology's efforts, which has been investing for over 20 years in research and development as well as the protection of its patent portfolio.

This proactive strategy, at the heart of the group's innovation, ensures sustainable technological differentiation while protecting its advancements from competition. This long-standing investment is now proving to be a major strategic asset, directly contributing to the company's value creation.

In the face of an uncertain economic environment, the favorable resolution of this patent case constitutes further evidence of the Group's stability. This robustness is bolstered by a strong financial position, ensuring the Group has the means to approach the future with confidence and remain resilient to economic uncertainties.

Beyond these fundamentals, MGI Digital Technology continues to pursue positive momentum and demonstrate solid performance. In this dynamic context, the DRUPA event plays a significant role in order intake and identifying new prospects.

Moreover, the integration of ALTIX from the second half of 2024 positions the group in the Printed Electronics market, further expanding its scope of activities thanks to recognized expertise.

With these strengths, MGI Digital Technology is confident in its ability to sustain strong growth throughout the year, accompanied by further improvement in its results.
